

THINKRECYCLE

Good for the environment. Good for you!

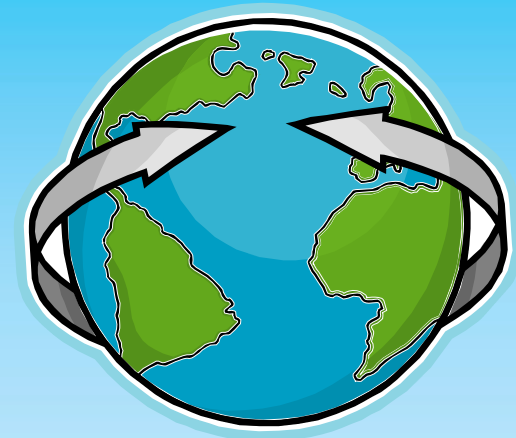

Did You Know That?

- In North America, 300 million printer cartridges and 500 million cell phones will be thrown away this year

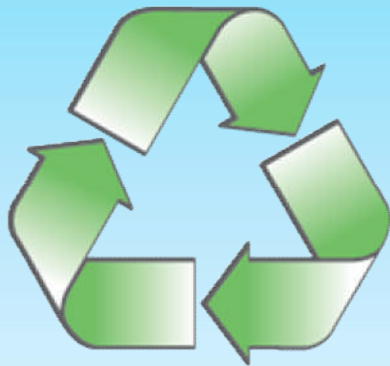

- That's 1 billion pounds of waste, that stacked on top of each other, can wrap around the earth once

- When cell phones and printer cartridges are thrown into landfill dump it takes them 1000 years to decompose

Good for the environment. Good for you!

How is this Harmful?

- Toxic pollution from landfills like lead and mercury, can make the soil, water and the air we breathe unsafe
- This Pollution can also create greenhouse gases which keep the earth's temperature warmer and is a cause of Global Warming

Good for the environment. Good for you!

There are ways to Help!

- Your school has already taken the first step in becoming a member of the Think Recycle Program

What is Think Recycle?

- Think Recycle is a recycling program that gives your school money for collecting and recycling printer cartridges and cell phones
- Think Recycle safely and responsibly recycles the print cartridges and cell phones so that they do not end up in landfill
- Think Recycle also plants trees on behalf of your schools recycling efforts

Good for the environment. Good for you!

Think Recycle Helps the Environment

- Think Recycle collects print cartridges and cell phones so that they can be reused
- By reusing the cartridges and cell phones, they are kept out of landfill and therefore reducing pollution and harmful chemicals
- Think Recycle will also plant trees on behalf of your schools recycling efforts
- Think Recycle has planted over 30,000 trees, and these trees will eventually remove millions of pounds of carbon dioxide from the air

Good for the environment. Good for you!

Trees Recycle Too!

- Oxygen and carbon dioxide are cycled through the environment by plants and animals
- Animals breathe in oxygen for energy and breathe out carbon dioxide, this is called respiration
- Trees are able to use the energy of sunlight to convert carbon dioxide back into oxygen in a process called photosynthesis.
- This means that trees help to clean the air by "breathing" in carbon dioxide and "breathing" out oxygen
- Trees also provide shade which lowers the temperature of the earth, helps us stay cool and use less energy

Good for the environment. Good for you!

You Can Help Too!

- Your school has already teamed up with Think Recycle to help the environment and to raise money
- Spread the word! Teach your family and friends the value of recycling. Make them aware of your schools recycling program so that they can help out too!

Good for the environment. Good for you!

Start Collecting Today!

- Ask your parents to collect empty print cartridges and cell phones from home and from their work place
- Friends and relatives can also help, tell them about Think Recycle and ask them to donate their empty print cartridges and cell phones
- Asking family and friends to take part in your recycling program creates awareness and this is the most important action in helping your school and the environment

Good for the environment. Good for you!

Think Recycle Reminder

- Think Recycle helps your school recycle and earn much needed funds
- Think Recycle safely recycles print cartridges and cell phones in order to keep them out of landfill
- Think Recycle plants trees which helps the environment and cleans the air we breathe
- Think Recycle is good for the environment and good for you!

Good for the environment. Good for you!

THINKRECYCLE

Thank YOU on behalf of future generations worldwide!
